LPF_Distortion

The circuit diagram illustrates an LPF_Distortion circuit. It features a B2-Tone generator (PTV09A-4025F-B503, 50k) connected to a TL074IN op-amp (U1.4) via a 68nF capacitor (C4). The op-amp is configured as a voltage follower with a feedback resistor (R17, 18k) and a biasing network (D3, D4, 1N4148 diodes). The output is connected to a switch (SW1, BI_INT) and a distortion block (A2-Distortion, PTV09A-4030F-A104, 100k, log). The final output is labeled 'Out'.
